PROFILE

Hands-on experience turning large, messy datasets into decision-ready insights; automated financial reporting for 320+ PSX companies at the State Bank of Pakistan, cutting processing time by 70%. Skilled in SQL, Python, Excel, and Power BI, with strong statistical analysis and stakeholder communication. Comfortable working with financial and operational data, building automated reporting pipelines, and communicating findings clearly to non-technical stakeholders.

EXPERIENCE

Data Science Intern - 10Pearls | Karachi, Pakistan July 2026 - Present

- Building a serverless ML pipeline forecasting the 3-day Air Quality Index, with automated ingestion, feature engineering, and real-time serving via a Hopsworks feature store.
- Training and evaluating Random Forest, Ridge Regression, and TensorFlow models (RMSE/MAE/R²) with SHAP interpretability; automated hourly pipelines and daily retraining via GitHub Actions, surfaced through a live Streamlit dashboard.

Data Science Intern - State Bank of Pakistan | Karachi, Pakistan Jun 2026 - Aug 2026

- Built a modular Python pipeline automating financial report extraction for 320+ PSX companies, cutting processing time by ~70%.
- Handled variable PDF layouts (Balance Sheet, P&L, Cash Flow) with rule-based validation, pushing extraction accuracy above 85%, and automated structured Excel report generation.

EDUCATION

Dawood University of Engineering and Technology 2022 - 2026

B.E Computer System - CGPA 3.94 / 4.0

Khursheed Govt. Girls Degree College 2020 - 2022

Intermediate (Pre-Engineering) - Grade A1

PROFESSIONAL SKILLS

- Python (Pandas, NumPy, Matplotlib, Seaborn)
- SQL
- Excel (pivot tables, formulas)
- PowerBI
- Data Cleaning & Validation
- ETL / Data Pipelines
- KPI Tracking
- Generative AI
- LLMs
- RAG

PROFESSIONAL CERTIFICATIONS

- Certified Data Scientist - PITP
- SQL for Data Science - Coursera
- Advanced Excel Tools for Data Analysis Specialization - Coursera
- AI: Machine Learning & Deep Learning - NAVTTC
- Generative AI - Pakistan Engineering Council

PROJECTS

Document Q&A Assistant (RAG) - Python, LangChain, OpenAI API

- Built a Retrieval-Augmented Generation app answering natural-language questions over a 10+ document PDF collection, grounding responses in source content.
- Designed the retrieval pipeline (chunking, top-k retrieval) and evaluated retrieval quality across test queries, reducing hallucinated answers versus direct LLM queries.

Pizza Sales Data Analysis - SQL Server, Excel

- Analyzed 48,000+ orders and 48,000+ transactions, calculating revenue, average order value, pizza volume, and product-level performance using SQL Server.
- Built Excel-based analysis covering 4 pizza categories, 5 sizes, and 24 hourly ordering periods, identifying peak ordering hours and top-performing products.
